Ally companion

One calm voice for every moment

Ally's bear sits in the corner of the screen and speaks up only when it matters. The card is the bear's speech: one surface, one button style, and urgency carried by words and the bear's face rather than loud colour.

Every state uses the same card

Only three things change with urgency: the status line, the bear's expression, and whether Ally waits for an answer.

Safety check

This message may not be real.

The page fills the whole screen, says your computer is infected, and gives a phone number to call.

Microsoft never asks you to call from a web page. Your computer is most likely fine.

Yes, close it

Keep it open

Listening · after asking a question out loud

Listening. Say “yes” or “no”.

The rules behind it

One surface

White card, soft shadow, no outlines. The corner nearest the bear is tight, so the card reads as the bear's speech.

Urgency in words

A status line ("Safety check", "Worth a look") and the bear's face set the tone. Amber appears only in that line.

One button language

Teal for the safe choice, a quiet tinted button for the other. 64 px tall, 14 px corners, a verb on every button (“Close it”, “Keep it open”).

Extras stay quiet

Calling a helper and "Why?" live in a footer as text actions, so the main decision is never crowded.
